Objective

Android Developer with hands-on experience building production-quality apps in Kotlin and Jetpack Compose, and working knowledge of Kotlin Multiplatform (KMP) and Compose Multiplatform (CMP) for cross-platform delivery. Comfortable across the modern Android stack — MVVM/MVI, Hilt dependency injection, Coroutines/Flow, Room, and REST integration. Looking to bring this hands-on mobile development background to an Android Developer role.

Technical Skills

Languages: Kotlin, Java, C++, C, Python, SQL

Android & Cross-Platform: Jetpack Compose, XML, Kotlin Multiplatform (KMP), Compose Multiplatform (CMP), MVVM, MVI, Clean Architecture

Core Android Libraries: Hilt / Dagger (Dependency Injection), Coroutines & Flow, Room DB, Retrofit, Navigation Component, WorkManager, LiveData/StateFlow

Backend & Cloud: Firebase (Auth, Realtime Database, Firestore), REST APIs, Postman

Tools & Practices: Android Studio, Git/GitHub, ZegoCloud SDK, Unit Testing (JUnit), Agile/Scrum

Experience

ADM Education and Welfare Society — Android Developer Intern

Oct 2024 – Jan 2025

Remote

- Built a modular Android application in Kotlin, following MVVM architecture, to manage internship placements for a large student base.
- Designed responsive UIs with Jetpack Compose and structured state with Coroutines/Flow, improving user navigation flow by 25%.
- Integrated Firebase Realtime Database and Auth with Hilt-based dependency injection to handle concurrent user sessions and secure data storage.

Key Projects

Food Bridge — Kotlin, Jetpack Compose, MVVM, Firestore, Google Maps API

Dec 2025

- Developed a community-driven Android app to reduce food waste, using the Google Maps API for real-time donation-location tracking.
- Structured data flow with Coroutines/Flow over Firestore, implementing local donation alerts and offline-friendly state updates.
- Built Compose UI for browsing nearby donations on a map and list view, with distance-based sorting to surface the closest pickups first.

CareNest — Kotlin, Jetpack Compose, MVVM, Hilt, ZegoCloud SDK, AI Integration

May 2025

- Integrated an AI-based symptom checker and enabled real-time video consultations using the ZegoCloud SDK.
- Applied MVVM with Hilt dependency injection and Coroutines for asynchronous calls, keeping the codebase scalable and testable during rapid development.
- Built the consultation flow end-to-end — from symptom input and AI-assisted triage through to booking and joining a live video call with a provider.

Agri Connect — Kotlin, Jetpack Compose, Retrofit, OpenWeatherMap API

Dec 2024

- Built an e-commerce platform for farmers with integrated weather forecasting via the OpenWeatherMap API.
- Developed a Kotlin-based chatbot, powered by Coroutines for async request handling, to assist users with crop-related queries.
- Implemented product listing, cart, and order flows with Retrofit-backed repositories, giving farmers a direct channel to sell produce.

Education

Jaypee Institute of Information Technology, Noida

2022 – 2026

B.Tech in Electronics and Communication — Relevant Coursework: Data Structures, DBMS, OS, OOPS

Late M.E Bhore Junior College, Padali

2019 – 2021

Higher Secondary Education (PCM)
